

PASSENGER CAR ENGINE OIL

National Premium[®] Motor Oils

National Premium[®] Motor Oils

Delivering superior performance and protection

National Premium passenger car engine oils are formulated from top quality base stocks and blended with advanced additive packages and viscosity modifiers to yield superior performance and protection under the most severe operating conditions. National Premium oils meet the challenges of lubricating today's modern gasoline engines, while offering superior performance in older gasoline powered engines.

Key features of National Premium oils:

- Superior wear protection
- Outstanding frictional properties
- Enhanced oxidation protection

In addition, National Premium oils offer all-season performance and protection in temperature extremes.

The technologies used to formulate National Premium engine oils are proven performers, backed by extensive field testing under the most severe operating conditions. The result is a family of engine oils with demonstrated dependability in these critical areas:

- Fuel economy
- Emission control systems compatibility
- Oil consumption due to volatility
- Rust protection

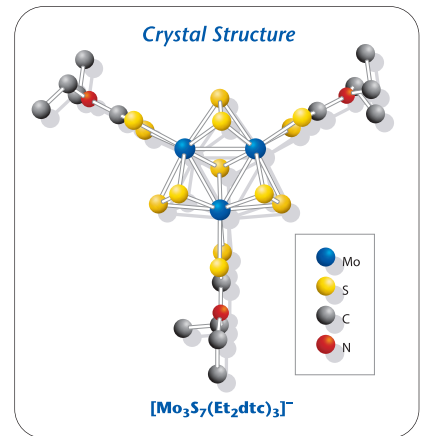

National Premium oils are the right choice for people who care about their engines. They deliver industry leading performance at competitive costs.

Hydroprocessed Base Stocks

National Premium lubricating oils for gasoline powered engines are formulated with only the highest quality base stocks. State-of-the-art hydrocracking, dewaxing and hydrotreating processes are utilized to manufacture the base stocks used by Pinnacle Oil. These catalytic and hydrogen processes yield stocks with superior oxidation and thermal stability performance.

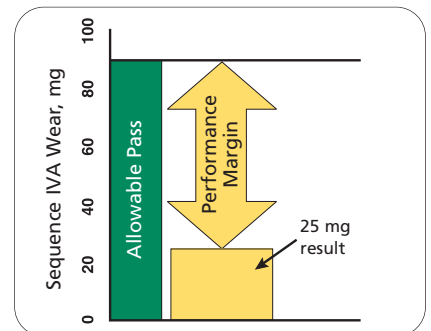

Unique Tri-nuclear Molybdenum Chemistry

National Premium engine oils contain a unique tri-moly compound. This molybdenum-based chemistry contributes to engine performance and durability by reducing friction and increasing the oxidative stability of the oil. Sliding friction and its associated wear, as well as oil thickening due to oxidation, are reduced.

Advanced Wear Protection

National Premium Motor Oils offer superior wear protection as demonstrated in the Sequence IVA performance test. Passing this industry calibrated engine test is required to meet ILSAC GF-5 and API SN specifications.

With a result of just 25 mg of wear vs. maximum allowable wear to pass this test at 90 mg, National Premium oils feature a significant built-in performance margin for wear protection.

Specifications National Premium[®] meets these performance requirements by viscosity grade:

- API Resource Conserving
- API SN and SM
- ILSAC GF-5 and GF-4
- DaimlerChrysler MC63955
- GM 6094M
- Ford WSS-M2C945-A
- Ford WSS-M2C946-A
